SUMMARY

I am a postdoctoral Research Associate in the Energy and Policy Research Group at the University of Cambridge Judge Business School and a Fellow at the Hughes Hall college. My research focuses on understanding the relationships between organizations and the natural environment to inform policy makers. Following my passion for nature, and especially the interactions between social and ecological systems, I investigate how organizational members interpret and respond to the natural environment stimuli, such as climate change or natural disasters. My research is multidisciplinary: it draws from organization theory, behavioral strategy, social and environmental psychology, geography, and natural sciences. It also uses both quantitative (OLS, SEM, PLSSEM, Text Analysis), experimental and qualitative methods (Content Analysis, Thematic Analysis, Inductive Coding). I developed my research interest through different experiences in Italy and abroad (Brazil, India, and Benin), and from the academic training in business schools in Europe (Bocconi, Esade), America (University of California, Babson College) and Asia (Indian Institute of Management).

ACADEMIC EMPLOYMENT

JUDGE BUSINESS SCHOOL (UNIVERSITY OF CAMBRIDGE) Cambridge, UK, Feb 2021 – Feb 2023
Post-Doctoral Research Associate (Energy Policy Research Group)

Project: **NEGEM, Quantifying and Deploying Responsible Negative Emissions**. The aim of this project is to inform policy making by assessing the realistic potential of Carbon Dioxide Removal (CDR) and its contribution to achieving climate neutrality. The project is highly interdisciplinary and carried out by a consortium of 16 partners, with the support of the EU Horizon 2020 Program funds.

Role: to conduct original analysis of the political economy of CDR technologies in comparative context, to examine stakeholder interaction and social license to operate in the contested field of CDR through surveys, interviews, text analysis of reports, expert elicitations and workshops with experimental design involving NGOs, government representatives, and companies in the energy and agroforestry sectors, to explore the framing of different CDR technologies, to understand the political limitations on scaling up of different configurations, to design realistic CDR deployment scenarios working closely with other partners in the project.
